

Technical Information

Proline Promag D 10

Electromagnetic flowmeter

Highly cost-effective wafer flowmeter with easy-to-use operation concept

Application

- The bidirectional measuring principle is virtually independent of pressure, density, temperature and viscosity
- For basic water applications; optimized for limited space and plastic pipe installations

Device properties

- Short installation length and low weight
- Integrated ground disks made of stainless steel
- International drinking water approvals
- System integration with HART, Modbus RS485
- Flexible operation with app and optional display

Your benefits

- Easy, fast centering of the sensor – innovative housing construction
- Energy-saving flow measurement – no pressure loss due to cross section constriction
- Maintenance-free – no moving parts
- Optimum usability – operation with mobile devices and SmartBlue app or display with touch screen
- Simple, time-saving commissioning – guided parameterization in advance and in the field
- Integrated verification – Heartbeat Technology

Ordering information

Detailed ordering information is available from your nearest sales organization www.addresses.endress.com or in the Product Configurator at www.endress.com:

1. Select the product using the filters and search field.
2. Open the product page.

3. Select **Configuration**.

Product Configurator - the tool for individual product configuration

- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

Function and system design

Measuring principle	8
Product design	8
IT security	9
Device-specific IT security	10

Measuring principle

Following *Faraday's law of magnetic induction*, a voltage is induced in a conductor moving through a magnetic field.

A0028962

U_e	Induced voltage
B	Magnetic induction (magnetic field)
L	Electrode spacing
I	Current
v	Flow velocity

In the electromagnetic measuring principle, the flowing medium is the moving conductor. The voltage induced (U_e) is proportional to the flow velocity (v) and is supplied to the amplifier by means of two measuring electrodes. The flow volume (Q) is calculated via the pipe cross-section (A). The DC magnetic field is generated by a switched direct current of alternating polarity.

Formulae for calculation

- Induced voltage $U_e = B \cdot L \cdot v$
- Volume flow $Q = A \cdot v$

Product design

The device consists of a transmitter and a sensor.

Two device versions are available:

- Compact version – transmitter and sensor form a mechanical unit.
- Remote version - transmitter and sensor are mounted in separate locations.

Compact version

The transmitter and sensor form a mechanical unit.

A0008262

IT security

We only provide a warranty if the device is installed and used as described in the Operating Instructions. The device is equipped with security mechanisms to protect it against any inadvertent changes to the device settings.

IT security measures in line with operators' security standards and designed to provide additional protection for the device and device data transfer must be implemented by the operators themselves.

Device-specific IT security

Access via Bluetooth

Secure signal transmission via Bluetooth uses an encryption method tested by the Fraunhofer Institute.

- Without the SmartBlue App, the device is not visible via Bluetooth.
- Only one point-to-point connection is established between the device and a smartphone or tablet.

Access via the SmartBlue App

Two access levels (user roles) are defined for the device: the **Operator** user role and the **Maintenance** user role. The **Maintenance** user role is configured when the device leaves the factory.

If a user-specific access code is not defined (in the Enter access code parameter), the default setting **0000** continues to apply and the **Maintenance** user role is automatically enabled. The device's configuration data are not write-protected and can be edited at all times.

If a user-specific access code has been defined (in the Enter access code parameter), all the parameters are write-protected. The device is accessed with the **Operator** user role. When the user-specific access code is entered a second time, the **Maintenance** user role is enabled. All parameters can be written to.

For detailed information, see the "Description of Device Parameters" document pertaining to the device.

Protecting access via a password

There are a variety of ways to protect against write access to the device parameters:

- User-specific access code:
Protect write access to the device parameters via all the interfaces.
- Bluetooth key:
The password protects access and the connection between an operating unit, e.g. a smartphone or tablet, and the device via the Bluetooth interface.

General notes on the use of passwords

- The access code and Bluetooth key that are valid when the device is delivered must be redefined during commissioning.
- Follow the general rules for generating a secure password when defining and managing the access code and Bluetooth key.
- The user is responsible for the management and careful handling of the access code and Bluetooth key.

Write protection switch

The entire operating menu can be locked via the write protection switch. The values of the parameters cannot be changed. Write protection is disabled when the device leaves the factory.

Write protection is enabled with the write protection switch on the back of the display module.

Input

Measured variable	12
Operable flow range	12
Measuring range	12

Measured variable

Direct measured variables	Volume flow (proportional to induced voltage)
Calculated measured variables	Mass flow

Operable flow range

Over 1000 : 1

Measuring range

Typically $v = 0.01$ to 10 m/s (0.03 to 33 ft/s) with specified measuring accuracy

Electrical conductivity:

- ≥ 5 $\mu\text{S/cm}$ for liquids in general
- ≥ 20 $\mu\text{S/cm}$ for demineralized water

Flow characteristic values in SI units

Nominal diameter		Recommended flow	Factory settings		
		min./max. full scale value ($v \sim 0.3/10$ m/s)	Full scale value current output ($v \sim 2.5$ m/s)	Pulse value (~ 2 pulse/s)	Low flow cut off ($v \sim 0.04$ m/s)
[mm]	[in]	[dm ³ /min]	[dm ³ /min]	[dm ³]	[dm ³ /min]
25	1	9 to 300	75	0.5	1
40	1 ½	25 to 700	200	1.5	3
50	2	35 to 1100	300	2.5	5
65	–	60 to 2000	500	5	8
80	3	90 to 3000	750	5	12
100	4	145 to 4700	1200	10	20

Flow characteristic values in US units

Nominal diameter		Recommended flow	Factory settings		
		min./max. full scale value ($v \sim 0.3/10$ m/s)	Full scale value current output ($v \sim 2.5$ m/s)	Pulse value (~ 2 pulse/s)	Low flow cut off ($v \sim 0.04$ m/s)
[in]	[m1m]	[gal/min]	[gal/min]	[gal]	[gal/min]
1	25	2.5 to 80	18	0.2	0.25
1 ½	40	7 to 190	50	0.5	0.75

–	65	16 to 500	130	1	2
3	80	24 to 800	200	2	2.5
4	100	40 to 1250	300	2	4

Output

Output versions	14
Output signal	14
Signal on alarm	17
Low flow cut off	17
Galvanic isolation	17
Protocol-specific data	17

Output versions

Order code 020: output; input	Output version
Option B	■ Current output 4 to 20 mA HART ■ Pulse/frequency/switch output
Option M	■ Modbus RS485 ■ Current output 4 to 20 mA

Output signal

Current output 4 to 20 mA HART / 4 to 20 mA HART Ex-i

Signal mode	Choose via terminal assignment: ■ Active ■ Passive
Current range	Can be set to: ■ 4 to 20 mA NAMUR ■ 4 to 20 mA US ■ 4 to 20 mA ■ Fixed current
Max. output current	21.5 mA
Open-circuit voltage	DC < 28.8 V (active)
Max. input voltage	DC 30 V (passive)
Max. load	400 Ω
Resolution	1 µA
Damping	Configurable: 0 to 999.9 s
Assignable measured variables	■ Off ■ Volume flow ■ Mass flow ■ Noise* ■ Coil current shot time* * Visibility depends on order options or device settings

Modbus RS485

Physical interface	RS485 in accordance with EIA/TIA-485 standard
--------------------	---

Current output 4 to 20 mA ¹⁾

Signal mode	Choose via terminal assignment: ■ Active ■ Passive
Current range	Can be set to: ■ 4 to 20 mA NAMUR ■ 4 to 20 mA US ■ 4 to 20 mA ■ Fixed current
Max. output current	21.5 mA
Open-circuit voltage	DC < 28.8 V (active)

¹⁾ Only available with Modbus RS485

Max. input voltage	DC 30 V (passive)
Max. load	400 Ω
Resolution	1 μ A
Damping	Configurable: 0 to 999.9 s
Assignable measured variables	■ Off ■ Volume flow ■ Mass flow ■ Noise* ■ Coil current shot time* * Visibility depends on order options or device settings

Pulse/frequency/switch output ²⁾

Function	Can be set to: ■ Pulse output ■ Frequency output ■ Switch output
Version	Open collector: Passive
Input values	■ DC 10.4 to 30 V ■ Max. 140 mA
Voltage drop	■ $\leq$ DC 2 V @ 100 mA ■ $\leq$ DC 2.5 V @ max. input current

Pulse output	
Pulse width	Configurable: 0.05 to 2 000 ms
Max. pulse rate	10 000 Impulse/s
Pulse value	Configurable
Assignable measured variables	■ Volume flow ■ Mass flow

Frequency output	
Output frequency	Configurable: end value frequency 2 to 10 000 Hz ($f_{\max} = 12\,500$ Hz)
Damping	Configurable: 0 to 999.9 s
Pulse/pause ratio	1:1
Assignable measured variables	■ Off ■ Volume flow ■ Mass flow ■ Noise* ■ Coil current shot time* ■ Reference electrode potential against PE* * Visibility depends on order options or device settings

Switch output	
Switching behavior	Binary, conductive or non-conductive
Switching delay	Configurable: 0 to 100 s

²⁾ Only available with 4 to 20 mA HART IO1

Number of switching cycles	Unlimited
Assignable functions	■ Disable ■ On ■ Diagnostic behavior: ■ Alarm ■ Warning ■ Warning and alarm ■ Limit value: ■ Off ■ Volume flow ■ Mass flow ■ Flow velocity ■ Totalizer 1...3 ■ Flow direction monitoring ■ Status ■ Empty pipe detection option (only possible with extended transmitter) ■ Low flow cut off * Visibility depends on order options or device settings

Signal on alarm

Output behavior in the event of a device alarm (failure mode)

HART

Device diagnostics	Device condition can be read out via HART Command 48
--------------------	--

Modbus RS485

Failure mode	Selectable: ■ NaN value instead of current value ■ Last valid value
--------------	--

Current output 4 to 20 mA

4 to 20 mA	Selectable: ■ Min. value: 3.59 mA ■ Max. value: 21.5 mA ■ Freely definable value between: 3.59 to 21.5 mA ■ Actual value ■ Last valid value
------------	---

Pulse/frequency/switch output

Pulse output	Selectable: ■ Actual value ■ No pulses
Frequency output	Selectable: ■ Actual value ■ 0 Hz ■ Defined value: 0 to 12 500 Hz
Switch output	Selectable: ■ Current status ■ Open ■ Closed

Low flow cut off

The switch points for low flow cut off are user-selectable.

Galvanic isolation

The outputs are galvanically isolated from one another and from earth.

Protocol-specific data

HART

Bus structure	The HART signal overlays the 4 to 20 mA current output.
Manufacturer ID	0x11
Device type ID	0x71
HART protocol revision	7
Device description files (DTM, DD)	Information and files under: www.endress.com

HART load	At least 250 Ω
System integration	Measured variables via HART protocol

IO-Link

IO-Link specification	Version 1.1.3
Device ID	
Manufacturer ID	17
Smart Sensor Profile	Smart Sensor Profile 2nd Edition V1.2; supports ■ Identification and Diagnosis ■ Digital Measuring and Switching Sensor (as per SSP type 4.3.4)
Smart Sensor Profile Type	Measuring profile type 4.3.4 Measuring and Switching Sensor, floating point, 4 channel
SIO mode	No
Speed	COM2 (38.4 kBaud)
Minimum cycle time	20 ms
Process data width	18 bytes (as per SSP 4.3.4)
ONrequestdata	8 Byte
Data storage	Yes
Block configuration	Yes
Device operational	3 s The device is operational once the supply voltage has been applied.
System integration	Cyclic measured variables: ■ Temperature [$^{\circ}\text{C}$] ■ Totalizer 1 [m^3]

Device description

In order to integrate field devices into a digital communication system, the IO-Link system needs a description of the device parameters, such as output data, input data, data format, data volume, and supported transfer rate.

These data are available in the device description (IODD) which is provided to the IO-Link Master when the communication system is commissioned.

The IODD can be downloaded as follows:

- www.endress.com
- <https://ioddfinder.io-link.com>

Modbus RS485

Physical interface	RS485 in accordance with EIA/TIA-485 standard
Terminating resistor	Not integrated
Protocol	Modbus Applications Protocol Specification V1.1
Response times	■ Direct data access: typically 25 to 50 ms ■ Auto-scan buffer (data range): typically 3 to 5 ms
Device type	Slave
Slave address range	1 to 247
Broadcast address range	0

Function codes	■ 03: Read holding register ■ 04: Read input register ■ 06: Write single registers ■ 08: Diagnostics ■ 16: Write multiple registers ■ 23: Read/write multiple registers
Broadcast messages	Supported by the following function codes: ■ 06: Write single registers ■ 16: Write multiple registers ■ 23: Read/write multiple registers
Supported baud rate	■ 1 200 BAUD ■ 2 400 BAUD ■ 4 800 BAUD ■ 9 600 BAUD ■ 19 200 BAUD ■ 38 400 BAUD ■ 57 600 BAUD ■ 115 200 BAUD
Data transfer mode	RTU
Data access	Each parameter can be accessed via Modbus RS485.  For Modbus register information
System integration	Information on system integration . ■ Modbus RS485 information ■ Function codes ■ Register information ■ Response time ■ Modbus data map

Energy supply

Terminal assignment

The terminal assignment is documented on an adhesive label.

The following terminal assignment is available:

Current output 4 to 20 mA HART (active) and pulse/frequency/switch output

Supply voltage		Output 1				Output 2	
1 (+)	2 (-)	26 (+)	27 (-)	24 (+)	25 (-)	22 (+)	23 (-)
L/+	N/-	Current output 4 to 20 mA HART (active)		-		Pulse/frequency/switch output (passive)	

Current output 4 to 20 mA HART (passive) and pulse/frequency/switch output

Supply voltage		Output 1				Output 2	
1 (+)	2 (-)	26 (+)	27 (-)	24 (+)	25 (-)	22 (+)	23 (-)
L/+	N/-	-		Current output 4 to 20 mA HART (passive)		Pulse/frequency/switch output (passive)	

Modbus RS485 and current output 4 to 20 mA (active)

Supply voltage		Output 1				Output 2	
1 (+)	2 (-)	26 (+)	27 (-)	24 (+)	25 (-)	22 (B)	23 (A)
L/+	N/-	Current output 4 to 20 mA (active)		-		Modbus RS485	

Modbus RS485 and current output 4 to 20 mA (passive)

Supply voltage		Output 1				Output 2	
1 (+)	2 (-)	26 (+)	27 (-)	24 (+)	25 (-)	22 (B)	23 (A)
L/+	N/-	-		Current output 4 to 20 mA (passive)		Modbus RS485	

Supply voltage

Order code for "Power supply"	Terminal voltage		Frequency range
Option A IO-Link port class A	DC 18 to 30 V ¹⁾		-
Option D	DC 24 V	-20 to +30 %	-
Option E	AC 100 to 240 V	-15 to +10 %	50/60 Hz, ±5 Hz
Option I	DC 24 V	-20 to +30 %	-
	AC 100 to 240 V	-15 to +10 %	50/60 Hz, ±5 Hz
Option M non-hazardous area	DC 24 V	-20 to +30 %	-
	AC 100 to 240 V	-15 to +10 %	50/60 Hz, ±5 Hz

- 1) These values are absolute minimum and maximum values. No tolerance applies. The DC power unit must be tested to ensure it meets technical safety requirements (e.g. PELV, SELV) with limited power sources (e.g. Class 2).

Power consumption

- Transmitter:
HART, Modbus RS485: Max. 10 W (active power)
- Switch-on current:
HART, Modbus RS485: Max. 36 A (< 5 ms) as per NAMUR Recommendation NE 21

Current consumption

- Max. 400 mA (24 V)
- Max. 200 mA (110 V, 50/60 Hz; 230 V, 50/60 Hz)

Power supply failure

- Totalizers stop at the last value measured.
- Device configuration remains unchanged.
- Error messages (incl. total operated hours) are stored.

Electrical connection

Transmitter terminal connections

 2 Supply voltage
 3 Transmitter: observe input values

Potential equalization**Introduction**

Correct potential equalization (equipotential bonding) is a prerequisite for stable and reliable flow measurement. Inadequate or incorrect potential equalization can result in device failure and present a safety hazard.

The following requirements must be observed to ensure correct, trouble-free measurement:

- The principle that the medium, the sensor and the transmitter must be at the same electrical potential applies.
- Take in-company grounding guidelines, materials and the grounding conditions and potential conditions of the pipe into consideration.
- The necessary potential equalization connections must be established using a ground cable with a minimum cross-section of 6 mm² (0.0093 in²). Also use a cable lug.
- In the case of remote device versions, the ground terminal in the example always refers to the sensor and not to the transmitter.

Abbreviations used

- PE (Protective Earth): potential at the potential equalization terminals of the device
- P_P (Potential Pipe): potential of the pipe, measured at the flanges
- P_M (Potential Medium): potential of the medium

Connection examples for standard situations**Unlined and grounded metal pipe**

- Potential equalization is via the measuring pipe.
- The medium is set to ground potential.

Starting conditions:

- Pipes are correctly grounded on both sides.
- Pipes are conductive and at the same electrical potential as the medium
- ▶ Connect the connection housing of the transmitter or sensor to ground potential via the ground terminal provided for this purpose.

Plastic pipe or pipe with insulating liner

- Potential equalization is via the ground terminal and flanges
- The medium is set to ground potential.

Starting conditions:

- The pipe has an insulating effect.
- Low-impedance medium grounding close to the sensor is not guaranteed.
- Equalizing currents through the medium cannot be ruled out.

1. Connect flanges to the ground terminal of the transmitter or sensor connection housing via the ground cable.
2. Connect the connection to ground potential.

Connection example with the potential of medium not equal to potential equalization connection

In these cases, the medium potential can differ from the potential of the device.

Metal, ungrounded pipe

The sensor and transmitter are installed in a way that provides electrical insulation from PE, e.g. applications for electrolytic processes or systems with cathodic protection.

Starting conditions:

- Unlined metal pipe
- Pipes with an electrically conductive liner

1. Connect the pipe flanges and transmitter via the ground cable.
2. Route the shielding of the signal lines via a capacitor (recommended value $1.5\mu\text{F}/50\text{V}$).
3. Device connected to power supply such that it is floating in relation to the potential equalization connection (isolation transformer). This measure is not required in the case of 24V DC supply voltage without PE (= SELV power unit).

Terminals

Spring terminals

- Suitable for strands and strands with ferrules.
- Conductor cross-section 0.2 to 2.5 mm^2 (24 to 12 AWG).

Cable entries

- Cable gland: $M20 \times 1.5$ for cable $\varnothing 6$ to 12 mm (0.24 to 0.47 in)
- Thread for cable entry:
 - NPT $\frac{1}{2}$ "
 - G $\frac{1}{2}$ ", G $\frac{1}{2}$ " Ex d
 - M20

Overvoltage protection

Mains voltage fluctuations	→ Supply voltage, 22
Overvoltage category	Overvoltage category II
Short-term, temporary overvoltage	Between cable and neutral conductor up to 1200 V for max. 5s
Long-term, temporary overvoltage	Up to 500 V between cable and ground

Cable specification

Requirements for connecting cable	30
Ground cable requirements	30
Connecting cable requirements	30

Requirements for connecting cable

Electrical safety

As per applicable national regulations.

Permitted temperature range

- Observe the installation guidelines that apply in the country of installation.
- The cables must be suitable for the minimum temperatures and maximum temperatures to be expected.

Power supply cable (incl. conductor for the inner ground terminal)

- A standard installation cable is sufficient.
- Provide grounding according to applicable national codes and regulations.

Signal cable

- Current output 4 to 20 mA HART:
A shielded cable is recommended, observe the grounding concept of the facility.
- Pulse/frequency/switch output:
Standard installation cable
- Modbus RS485:
Cable type A according to EIA/TIA-485 standard is recommended
- Current output 4 to 20 mA:
Standard installation cable

Ground cable requirements

Copper wire: at least 6 mm² (0.0093 in²)

Connecting cable requirements

Connecting cable only necessary for remote version.

Electrode cable	Coil current cable

Armored connecting cable

Armored connecting cables with additional, metal reinforcing braid can be ordered from Endress+Hauser. Armored connecting cables are used:

- When laying the cable directly in the ground
- Where there is a risk of damage from rodents
- If using the device below IP68 degree of protection

Electrode cable

Design	3×0.38 mm ² (21 AWG) with common, braided copper shield (Ø ~ 9.5 mm (0.37 in)) and individual shielded cores
Conductor resistance	≤ 50 Ω/km (0.015 Ω/ft)
Capacitance: core/shield	≤ 420 pF/m (128 pF/ft)
Cable length	Depends on the medium conductivity: maximum 200 m (656 ft)
Cable lengths (available for order)	5 m (15 ft), 10 m (30 ft), 20 m (60 ft) or variable length: maximum 200 m (656 ft) Armored cables: variable length up to maximum 200 m (656 ft)
Operating temperature	-20 to +80 °C (-4 to +176 °F)

Coil current cable

Design	3×0.75 mm ² (18 AWG) with common, braided copper shield (Ø ~ 9.5 mm (0.37 in)) and individual shielded cores
Conductor resistance	≤ 37 Ω/km (0.011 Ω/ft)
Capacitance: core/shield	≤ 120 pF/m (37 pF/ft)
Cable length	Depends on the medium conductivity, max. 200 m (656 ft)
Cable lengths (available for order)	5 m (15 ft), 10 m (30 ft), 20 m (60 ft) or variable length up to max. 200 m (656 ft) Armored cables: variable length up to max. 200 m (656 ft)
Operating temperature	-20 to +80 °C (-4 to +176 °F)
Test voltage for cable insulation	≤ AC 1433 V rms 50/60 Hz or ≥ DC 2026 V

Performance characteristics

Reference operating conditions	34
Maximum measurement error	34
Repeatability	34
Influence of ambient temperature	34

Reference operating conditions

- Error limits based on ISO 20456:2017
- Water, typically: +15 to +45 °C (+59 to +113 °F); 0.5 to 7 bar (73 to 101 psi)
- Data as indicated in the calibration protocol
- Accuracy based on accredited calibration rigs according to ISO 17025

 To obtain measured errors, use the *Applicator* sizing tool → *Service-specific accessory* ,  89

Maximum measurement error

o. r. = of reading

Error limits under reference operating conditions

Volume flow

±0.5 % o. r.±1 mm/s (±0.04 in/s)

 Fluctuations in the supply voltage do not have any effect within the specified range.

Accuracy of outputs

Current output	±5 µA
Pulse/frequency output	Max. ±100 ppm o. r. (across the entire ambient temperature range)

Repeatability

Volume flow	Max. ±0.1 % o. r. ± 0.5 mm/s (0.02 in/s)
-------------	--

Influence of ambient temperature

Current output	Temperature coefficient max. 1 µA/°C
Pulse/frequency output	No additional effect. Is included in the accuracy.

Installation

Installation conditions

36

Installation conditions

Flow direction

Install the device in the direction of flow.

Note the direction of arrow on the nameplate.

Installation with inlet runs and outlet runs

Ensure straight, undisturbed inlet and outlet runs.

To avoid negative pressure and to comply with accuracy specifications, install the sensor upstream from assemblies that produce turbulence (e.g. valves, T-sections) and downstream from pumps → *Installation near pumps*, 39.

Keep a sufficient distance to the next pipe elbow.

Orientations

Vertical orientation, upward direction of flow

For all applications.

Horizontal orientation, transmitter at top

This orientation is suitable for the following applications:

For low process temperatures in order to maintain the minimum ambient temperature for the transmitter.

Horizontal orientation, transmitter at bottom

This orientation is suitable for the following applications:

- For high process temperatures in order to maintain the maximum ambient temperature for the transmitter.
- To prevent the electronics module from overheating in the case of a sharp rise in temperature (e.g. CIP or SIP processes), install the measuring instrument with the transmitter component pointing downwards.

This orientation is not suitable for the following applications:
If empty pipe detection is to be used.

Horizontal orientation, transmitter at side

This orientation is not suitable

Vertical

Optimum for self-emptying pipe systems.

Horizontal

Ideally, the measuring electrode plane should be horizontal. This prevents brief insulation of the measuring electrodes by entrained air bubbles.

1 Measuring electrodes for signal detection

Mounting locations

A0042131

- Do not install the device at the highest point of the pipe.
- Do not install the device upstream from a free pipe outlet in a down pipe.

The device should ideally be installed in an ascending pipe.

A0042317

Installation near control valves

Install the device in the direction of flow upstream from the control valve.

A0041091

Installation upstream from a down pipe

NOTICE

Negative pressure in the measuring pipe can damage the liner!

- If installing upstream from down pipes with a length $h \geq 5$ m (16.4 ft): install a siphon with a vent valve downstream from the device.

This arrangement prevents the flow of liquid stopping in the pipe and air entrainment.

A0041089

Installation with partially filled pipes

- Partially filled pipes with a gradient require a drain-type configuration.
- The installation of a cleaning valve is recommended.

A0041088

Installation near pumps

NOTICE

Negative pressure in the measuring pipe can damage the liner!

- ▶ Install the device in the direction of flow downstream from the pump.
- ▶ Install pulsation dampers if reciprocating, diaphragm or peristaltic pumps are used.

Information on the measuring system's resistance to vibration and shock
→ *Vibration-resistance and shock-resistance*, 42

Pipe vibrations

A remote version is recommended in the event of strong pipe vibrations.

NOTICE

Pipe vibrations can damage the device!

- ▶ Do not expose the device to strong vibrations.
- ▶ Support the pipe and fix it in place.
- ▶ Support the device and fix it in place.
- ▶ Mount the sensor and transmitter separately.

Adapters

Suitable adapters (double-flange reducers) can be used to install the sensor in larger-diameter pipes. The resulting higher rate of flow improves measuring accuracy with very slow-moving media.

i The nomogram shown here can be used to calculate the pressure loss caused by reducers and expanders. It only applies to liquids with a viscosity similar to that of water.

1. Calculate the ratio of the diameters d/D .
2. Determine the flow velocity after the reduction.
3. From the chart, determine the pressure loss as a function of the flow velocity v and the d/D ratio.

A0041086

Seals

Note the following when installing seals:

- Use seals with a hardness rating of 70° Shore.
- For DIN flanges: only install seals according to DIN EN 1514-1.

Magnetism and static electricity

Do not install the device near magnetic fields, e.g. motors, pumps, transformers.

A0042152

Outdoor use

- Avoid exposure to direct sunlight.
- Install in a location protected from sunlight.
- Avoid direct exposure to weather conditions.
- Use a weather protection cover → *Transmitter*, 88.

A0023989

Environment

Ambient temperature range	42
Storage temperature	42
Relative humidity	42
Operating height	42
Degree of protection	42
Vibration-resistance and shock-resistance	42
Electromagnetic compatibility (EMC)	43

Ambient temperature range

Transmitter	–40 to +60 °C (–40 to +140 °F)
Local display	–20 to +60 °C (–4 to +140 °F) The readability of the display may be impaired at temperatures outside the temperature range.
Sensor	–20 to +60 °C (–4 to +140 °F)
Liner	Do not exceed or fall below the permitted temperature range of the liner → <i>Medium temperature range</i> , 46..  Dependency of ambient temperature on medium temperature → <i>Medium temperature range</i> , 46

Storage temperature

The storage temperature corresponds to the ambient temperature range of the transmitter and sensor.

Relative humidity

The device is suitable for use in outdoor and indoor areas with a relative humidity of 5 to 95%.

Operating height

According to EN 61010-1

- Without overvoltage protection: ≤ 2 000 m
- With overvoltage protection: > 2 000 m (e.g. Endress+Hauser HAW series)

Degree of protection

Transmitter	■ IP66/67, Type 4X enclosure, suitable for pollution degree 4 ■ Open housing: IP20, Type 1 enclosure, suitable for pollution degree 2
Sensor	IP66/67, Type 4X enclosure, suitable for pollution degree 4

Vibration-resistance and shock-resistance

Compact version

Vibration, sinusoidal Following IEC 60068-2-6	2 to 8.4 Hz	3.5 mm peak
	8.4 to 2 000 Hz	1 g peak
Vibration, broad-band random Following IEC 60068-2-64	10 to 200 Hz	0.003 g ² /Hz
	200 to 2 000 Hz	0.001 g ² /Hz (1.54 g rms)
Shocks, half-sine Following IEC 60068-2-27	6 ms 30 g	

Shock

Due to rough handling similar to IEC 60068-2-31.

Remote version (sensor)

Vibration, sinusoidal Following IEC 60068-2-6	2 to 8.4 Hz	7.5 mm peak
	8.4 to 2 000 Hz	1 g peak
Vibration, broad-band random Following IEC 60068-2-6	10 to 200 Hz	0.01 g ² /Hz
	200 to 2 000 Hz	0.003 g ² /Hz (2.7 g rms)

Shocks, half-sine Following IEC 60068-2-6	6 ms 50 g
---	-----------

Shock

Due to rough handling similar to IEC 60068-2-31.

Electromagnetic compatibility (EMC)

As per IEC/EN 61326 and
HART, Modbus RS485: NAMUR Recommendation NE 21

For more information: Declaration of Conformity

Process

Medium temperature range	46
Conductivity	46
Flow limit	46
Pressure-temperature ratings	47
Pressure tightness	47
Pressure loss	47

Medium temperature range

0 to +60 °C (+32 to +140 °F)

Conductivity

The minimum conductivity is:

- 5 µS/cm for liquids in general
- 20 µS/cm for demineralized water

The following basic conditions must be observed for < 20 µS/cm:

- Order code 013 for "Functionality", option D "Extended transmitter" and higher output signal damping is recommended for values under 20 µS/cm.
- Observe the maximum permitted cable length L_{max} . This length is determined by the conductivity of the medium.
- With order code 013 "Functionality", option A "Standard transmitter" and empty pipe detection (EPD) switched on, the minimum conductivity is 20 µS/cm.
- With order code 013 "Functionality", option A "Standard transmitter" - remote version, empty pipe detection may not be activated if $L_{max} > 20$ m.

i Note that in the case of the remote version, the minimum conductivity depends on the cable length.

3 Permitted length of connecting cable

Colored area = permitted range
 L_{max} = length of connecting cable in [m] ([ft])
[$\mu\text{S/cm}$] = medium conductivity
Red line = order code 013 "Functionality", option A "Standard transmitter"
Blue line = order code 013 "Functionality", option D "Extended transmitter"

Flow limit

Pipe diameter and flow rate determine the nominal diameter of the sensor.

i The flow velocity is increased by reducing the sensor nominal diameter.

2 to 3 m/s (6.56 to 9.84 ft/s)	Optimum flow velocity
$v < 2$ m/s (6.56 ft/s)	For abrasive media, e.g. potter's clay, lime milk, ore slurry
$v > 2$ m/s (6.56 ft/s)	For media producing buildup, e.g. wastewater sludge

Pressure-temperature ratings

Permitted process pressure

Fixed flange similar to EN 1092-1
Fixed flange similar to ASME B16.5
Fixed flange similar to JIS B2220

Stainless steel

Pressure tightness

Measuring tube: 0 mbar abs. (0 psi abs.) at a medium temperature of $\leq +60\text{ }^{\circ}\text{C}$ (+140 °F)

Pressure loss

- No pressure loss: transmitter installed in a pipe with the same nominal diameter.
- Pressure loss information when adapters are used → *Adapters*, 40

Mechanical construction

Weight	50
Measuring tube specification	51
Materials	52
Mounting bolts	53
Fitted electrodes	53
Process connections	54

Weight

All values refer to devices with flanges with a standard pressure rating.
Weight data are guideline values. The weight may be lower than indicated depending on the pressure rating and design.

Transmitter remote version

4	7.05	3.82	6.3	–

1) Max. Ø seals

Couplings

External thread: ASME B1.20.1

Order code for "Process connection", option I5S

Mass B: internal diameter depends on the liner → *Measuring tube specification*, 51

Technical drawing of a coupling. It shows a cross-section of a blue rectangular block with a central hole. Dimension A is the total height of the block. Dimension B is the height of the central hole. Dimension C is the height of the top flange. A small circle with a dot inside is shown on the right side of the block, representing a thread or a hole.

Local display

Operation concept	78
Operation options	78
Operating tools	79

Operation concept

Operation method	Operation via local display with touch screen ¹⁾
Reliable operation	■ Operation in local language ■ Standardized operating concept on the device and in the SmartBlue app ■ Write protection ■ When electronics modules are replaced: configurations are transferred using the T-DAT Backup device memory. The device memory contains process data, device data and the event logbook. No reconfiguration is necessary.
Diagnostic behavior	Efficient diagnostic behavior increases measurement availability: ■ Open troubleshooting measures via local display and SmartBlue app. ■ Diverse simulation options ■ Logbook of events that have occurred.

1) Only for communication protocols HART and Modbus RS485

Operation options

Local display	  4 Only for HART and Modbus RS485 communication protocols Display elements: ■ LCD touch screen ¹⁾ ■ Depends on the orientation, automatic alignment of the local display ■ Configuration of display format for measured variables and status variables Operating elements: ■ Touch screen ¹⁾ ■ Local display can also be accessed in the hazardous area.
SmartBlue app	■ The SmartBlue app allows the user to put devices into operation and operate them. ■ Based on Bluetooth ■ No separate driver required ■ Available for mobile handheld terminals, tablets and smartphones ■ Suitable for convenient and secure access to devices in hard-to-reach locations or in hazardous areas ■ Can be used within a 20 m (65.6 ft) radius of the device ■ Encrypted and secure data transmission ■ No data loss during commissioning and maintenance ■ Diagnostic information and process information in real time

1) Only for HART and Modbus RS485 communication protocols

Certificates and approvals

Non-Ex approval	82
Pressure Equipment Directive	82
Drinking water approval	82
HART certification	82
Radio approval	82
External standards and guidelines	82

Non-Ex approval

- cCSAus
- EAC
- UKCA

Pressure Equipment Directive

- CRN
- PED Cat. II/III
- PESR Cat. II/III

Drinking water approval

- ACS
- KTW/W270
- NSF 61
- WRAS BS 6920

HART certification

The device is certified and registered by the FieldComm Group. The measuring system meets all the requirements of the following specifications:

- Certified according to HART 7
- The device can also be operated with certified devices of other manufacturers (interoperability).

Radio approval

The device has radio approvals.

External standards and guidelines

- IEC/EN 60529
Degrees of protection provided by enclosure (IP code)
- IEC/EN 60068-2-6
Environmental influences: Test procedure - Test Fc: vibrate (sinusoidal)
- IEC/EN 60068-2-31
Environmental influences: Test procedure - Test Ec: shocks due to rough handling, primarily for devices.
- IEC/EN 61010-1
Safety requirements for electrical equipment for measurement, control and laboratory use - general requirements.
- CAN/CSA-C22.2 No. 61010-1-12

Electromagnetic compatibility and radio spectrum matters (ERM).

Application packages

Use	86
Heartbeat Verification + Monitoring	86

Use

Many different application packages are available to enhance the functionality of the device. Such packages might be needed to address safety aspects or specific application requirements.

The application packages can be ordered with the device or subsequently from Endress+Hauser. Detailed information on the relevant order code is available from your local Endress+Hauser sales organization or on the product page of the Endress+Hauser website: www.endress.com.

Heartbeat Verification + Monitoring

Heartbeat Verification

Availability depends on the product structure.

Meets the requirement for traceable verification according to DIN ISO 9001:2008 Clause 7.6 a) "Control of monitoring and measuring equipment":

- Functional testing in the installed state without interrupting the process.
- Traceable verification results on request, including report.
- Simple testing process with local operation or other operating interfaces
- Clear measuring point assessment (pass/fail) with high total test coverage within the framework of manufacturer specifications.
- Extension of calibration intervals according to operator's risk evaluation

Heartbeat Monitoring

Availability depends on the product structure.

Heartbeat Monitoring continuously provides data characteristic of the measuring principle to an external condition monitoring system, facilitating preventive maintenance or process analysis. These data enable the operator to:

- Draw conclusions - using these data and other information - about the impact the process influences, e.g. corrosion, abrasion, formation of buildup, have on the measuring performance over time.
- Schedule servicing in time.
- Monitor the process quality or product quality, e.g. gas pockets.

Communication-specific accessories	89
Service-specific accessory	89
System components	90

Device-specific accessories

Transmitter

Accessories	Description	Order code
Proline 10 transmitter	 Installation Instructions EA01350D	5XBBXX-*...*
Weather protection cover	Protects the device from weather exposure:  Installation Instructions EA01351D	71502730
Connecting cable	Can be ordered with the device. The following cable lengths are available: order code for "Cable, sensor connection" ■ 5 m (16 ft) ■ 10 m (32 ft) ■ 20 m (65 ft) ■ User-configurable cable length, m (ft)  Max. cable length: 200 m (660 ft)	DK5013-*...*

Sensor

Accessories	Description
Mounting kit for wafer version	Consists of: ■ Mounting bolts ■ Nuts with washers ■ Flange seals ■ Centering sleeves (if required for the flange)
Seal set	Consists of: 2 flange seals

Communication-specific accessories

Accessories	Description
Commubox FXA195 USB/HART modem	Intrinsically safe HART communication with FieldCare and FieldXpert  Technical Information TI00404F
Commubox FXA291	Connects the Endress+Hauser devices with the CDI interface (= Endress+Hauser Common Data Interface) to the USB interface of a personal computer or laptop.  Technical Information TI405C/07
HART Loop Converter HMX50	Is used to evaluate and convert dynamic HART process variables to analog current signals or limit values.  ■ Technical Information TI00429F ■ Operating Instructions BA00371F
Fieldgate FXA42	Transmission of measured values from connected 4 to 20 mA analog and digital devices.  ■ Technical Information TI01297S ■ Operating Instructions BA01778S ■ Product page: www.endress.com/fxa42
Field Xpert SMT50	The Field Xpert SMT50 table PC for device configuration enables mobile plant asset management. It is suitable for commissioning and maintenance staff to manage field instruments with a digital communication interface and to record progress. This tablet PC is designed as an all-in-one solution with a preinstalled driver library and is an easy-to-use, touch-sensitive tool which can be used to manage field instruments throughout their entire life cycle.  ■ Technical Information TI01555S ■ Operating Instructions BA02053S ■ Product page: www.endress.com/smt50
Field Xpert SMT70	Tablet PC for the configuration of the device. Enables mobile Plant Asset Management to manage the devices with a digital communication interface. Suitable for Zone 2.  ■ Technical Information TI01342S ■ Operating Instructions BA01709S ■ Product page: www.endress.com/smt70
Field Xpert SMT77	Tablet PC for the configuration of the device. Enables mobile Plant Asset Management to manage the devices with a digital communication interface. Suitable for Zone 1.  ■ Technical Information TI01418S ■ Operating Instructions BA01923S ■ Product page: www.endress.com/smt77

Service-specific accessory
