

# General Specifications

## EJX438A Diaphragm Sealed Gauge Pressure Transmitter

**DP***harp* **EJX**<sup>TM</sup>
**GS 01C25J03-01EN**

[Style: S2]

Diaphragm seal is used to prevent process medium from entering directly into the pressure-sensing assembly of the pressure transmitter, it is connected to the transmitter using capillary filled with fill fluid.

EJX438A Diaphragm Sealed Gauge Pressure Transmitters can be used to measure liquid, gas, or steam pressure. EJX438A outputs a 4 to 20 mA DC signal corresponding to the measured pressure. It also features quick response, remote setup and monitoring via BRAIN or HART communications, and diagnostics and optional status output for pressure high/low alarm.

The multi-sensing technology provides the advanced diagnostic function to detect such abnormality as an impulse line blockage. FOUNDATION Fieldbus and PROFIBUS PA protocol types are also available. All EJX series models in their standard configuration, with the exception of the Fieldbus and PROFIBUS types, are certified as complying with SIL 2 for safety requirement.

### ■ STANDARD SPECIFICATIONS

Refer to GS 01C25T02-01EN for Fieldbus communication type and GS 01C25T04-01EN for PROFIBUS PA communication type for the items marked with “◇.”

#### □ SPAN AND RANGE LIMITS

| Measurement Span/Range |                 | MPa          | psi (/D1)    | bar (/D3)     | kgf/cm <sup>2</sup> (/D4) |
|------------------------|-----------------|--------------|--------------|---------------|---------------------------|
| A*1                    | Span            | 0.035 to 3.5 | 5 to 500     | 0.35 to 35    | 0.35 to 35                |
|                        | Range           | -0.1 to 3.5  | -14.5 to 500 | -1 to 35      | -1 to 35                  |
| B                      | Flush type*1    | Span         | 0.16 to 16   | 23 to 2300    | 1.6 to 160                |
|                        |                 | Range        | -0.1 to 16   | -14.5 to 2300 | -1 to 160                 |
|                        | Extended type*1 | Span         | 0.16 to 7    | 23 to 1000    | 1.6 to 70                 |
|                        |                 | Range        | -0.1 to 7    | -14.5 to 1000 | -1 to 70                  |

\*1: Measurement range is within the flange rating.

#### □ PERFORMANCE SPECIFICATIONS

Zero-based calibrated span, linear output, wetted parts material code SW for 3-inch flange flush type, fill fluid code B, and capillary length of 5 m. For Fieldbus and PROFIBUS PA communication types, use calibrated range instead of span in the following specifications.

##### Specification Conformance

EJX series ensures specification conformance to at least  $\pm 3\sigma$ .

##### Reference Accuracy of Calibrated Span

(includes terminal-based linearity, hysteresis, and repeatability)

| Measurement span        |          | A                              | B                 |
|-------------------------|----------|--------------------------------|-------------------|
| Reference accuracy      | X ≤ span | ±0.15% of Span                 |                   |
|                         | X > span | ±(0.1+0.005 URL/span)% of Span |                   |
| X                       |          | 0.35 MPa (50 psi)              | 1.6 MPa (230 psi) |
| URL (upper range limit) |          | 3.5 MPa (500 psi)              | 16 MPa (2300 psi) |

##### Ambient Temperature Effects per 28°C (50°F) Change

| Capsule | Effect                  |
|---------|-------------------------|
| A and B | ±(0.5% Span+0.025% URL) |

**Power Supply Effects(Output signal code D, E and J)**

±0.005 % per Volt (from 21.6 to 32 V DC, 350Ω)

**Response Time (All capsules) “◇”**

200 ms (approximate value at normal temperature)

When software damping is set to zero and including dead time of 45 ms (nominal)

**□ FUNCTIONAL SPECIFICATIONS****Output “◇”**

Two wire 4 to 20 mA DC output with digital communications.

BRAIN or HART FSK protocol are superimposed on the 4 to 20 mA signal.

Output range: 3.6 mA to 21.6 mA

Output limits conform to NAMUR NE43 can be preset by option code C2 or C3.

**Failure Alarm (Output signal code D, E and J)**

Output status at CPU failure and hardware error;

Up-scale: 110%, 21.6 mA DC or more (standard)

Down-scale: -5%, 3.2 mA DC or less

Analog output status at process abnormality (Option code /DG6);

The result of process abnormality detected by the advanced diagnostic function can be reflected to an analog alert status. The following three setting modes are available.

|                |     | Mode                      |                                                                                        |               |
|----------------|-----|---------------------------|----------------------------------------------------------------------------------------|---------------|
|                |     | Burnout                   | Fall back                                                                              | Off           |
| Standard       |     | 110%,<br>21.6mA or more   | Holds to a<br>specified value<br>within the<br>output range<br>from 3.6mA to<br>21.6mA | Normal output |
| Option<br>Code | /C1 | -2.5%,<br>3.6mA or less   |                                                                                        |               |
|                | /C2 | -1.25%,<br>3.8mA or less  |                                                                                        |               |
|                | /C3 | 103.1%,<br>20.5mA or more |                                                                                        |               |

**Damping Time Constant (1st order)**

Amplifier damping time constant is adjustable from 0.00 to 100.00 s by software and added to response time.

Note: For BRAIN protocol type, when amplifier software damping is set to less than 0.5 s, communication may occasionally be unavailable during the operation, especially while output changes dynamically. The default setting of damping ensures stable communication.

**Update Period “◇”**

Pressure: 45 ms

**Zero Adjustment Limits**

Zero can be fully elevated or suppressed, within the lower and upper range limits of the capsule.

**External Zero Adjustment**

External zero is continuously adjustable with 0.01% incremental resolution of span. Re-range can be done locally using the digital indicator with rangesetting switch.

**Integral Indicator (LCD display, optional) “◇”**

5-digit numerical display, 6-digit unit display and bar graph.

The indicator is configurable to display one or up to three of the following variables periodically;

Pressure in %, scaled pressure, measured pressure.

See also “Factory Setting.”

**Local Parameter Setting (Output signal code D, E, and J)**

Parameter configuration by the external zero adjustment screw and push button (Integral indicator code E) offers easy and quick setup for parameters of Loop test, Tag number, Unit, LRV, URV, Damping, Output mode (linear/square root), Display out 1, and Re-range by applying actual pressure (LRV/URV) and Device Information.

**Self Diagnostics**

CPU failure, hardware failure, configuration error, process alarm for pressure or capsule temperature. User-configurable process high/low alarm for pressure is also available, and its status can be output when optional status output is specified.

**Advanced Diagnostics (optional) “◇”**

Applicable for Output signal code E, J and F.

• Impulse line blockage detection

The impulse line condition can be calculated and detected by extracting the fluctuation component from the static pressure signal.

**Signal Characterizer (Output signal code D, E and J)**

User-configurable 10-segment signal characterizer for 4 to 20 mA output.

**Capillary Fill Fluid Density Compensation (Output signal code D, E and J)**

Compensation of the zero shift by the ambient temperature effect on the capillary tube.

**Status Output (optional, output signal code D, E and J)**

One transistor contact output (sink type) to output the status of user configurable high/low alarm for pressure.

Contact rating: 30 V DC, 120 mA DC max.

Refer to ‘Terminal Configuration’ and ‘Wiring Example for Analog Output and Status Output.’

**SIL Certification**

EJX series transmitters except Fieldbus and PROFIBUS PA communication types are certified in compliance with the following standards;

IEC 61508: 2010;

Functional Safety of Electrical/electronic/programmable electronic related systems; SIL 2 capability for single transmitter use, SIL 3 capability for dual transmitter use.

Reliability Data different depending on hardware and software revision.

For details, refer to Functional Safety Data Sheet.

(Document number: TI 01C25A05-01EN or TI 01C25A05-21EN for option code SLT )

The document can be downloaded from the website of Yokogawa.

(Website address: <https://www.yokogawa.com/solutions/products-platforms/field-instruments/>)

□ **NORMAL OPERATING CONDITION**  
(Optional features or approval codes may affect limits.)

**Ambient Temperature Limits**

- 40 to 60°C (-40 to 140°F)
- 30 to 60°C (-22 to 140°F) with LCD display
- (Note: The ambient temperature limits must be within the fill fluid operating temperature range, see table 1.)

**Process Temperature Limits**

See table 1.

**Ambient Humidity Limits**

0 to 100% RH

**Working Pressure Limits**

See table 1.  
For atmospheric pressure or below, see figure 1-1, 1-2, 1-3, 1-4, and 1-5.

**Supply & Load Requirements**

(Output signal code D, E and J. Optional features or approval codes may affect electrical requirements.)

With 24 V DC supply, up to a 550Ω load can be used. See figure 2.

**Supply Voltage “◇”**

- 10.5 to 42 V DC for general use and flameproof type.
- 10.5 to 32 V DC for lightning protector (option code /A.)
- 10.5 to 30 V DC for intrinsically safe, type n, or non-incendive.
- Minimum voltage limited at 16.6 V DC for digital communications, BRAIN and HART

**Load (Output signal code D, E and J)**

- 0 to 1290Ω for operation
- 250 to 600Ω for digital communication

**Communication Requirements “◇”**

(Approval codes may affect electrical requirements.)

**BRAIN**

**Communication distance**

Up to 2 km (1.25 miles) when using CEV polyethylene-insulated PVC-sheathed cables. Communication distance varies depending on type of cable used.

**Load capacitance**

0.22 μF or less

**Load inductance**

3.3 mH or less

**Input impedance of communicating device**

10 kΩ or more at 2.4 kHz.

**EMC Conformity Standards**

- EN 61326-1 Class A, Table2
- EN 61326-2-3
- EN 61326-2-5 (for fieldbus)

**European Pressure Equipment Directive**

2014/68/EU  
Sound Engineering Practice

**EU RoHS Directive**

EN IEC 63000

**Safety Requirement Standards**

- EN 61010-1, C22.2 No.61010-1
- Installation category: I  
(Anticipated transient overvoltage 330 V)
- Pollution degree: 2
- Indoor/Outdoor use

Table 1. Process temperature, Ambient temperature, and Working pressure

|                                               | Code | Process temperature*1            | Ambient temperature*2           | Working pressure                                                   | Specific gravity*3 |
|-----------------------------------------------|------|----------------------------------|---------------------------------|--------------------------------------------------------------------|--------------------|

| Silicone oil (high temp. and high vacuum use) | 2    | 10 to 310°C<br>(50 to 590°F)     | 10 to 60°C *5<br>(50 to 140°F)  |                                                                    | 1.09               |
| Silicone oil (high vacuum use)*6              | 4    | −10 to 100°C<br>(14 to 212°F)    | −10 to 60°C *5<br>(14 to 140°F) |                                                                    | 1.07               |

\*1: See figure 1-1, 1-2, 1-3, 1-4, and 1-5 'Working Pressure and Process Temperature.'

\*2: This ambient temperature is the transmitter ambient temperature.

\*3: Approximate values at a temperature of 25°C (77°F)

\*4: In case of wetted parts material code TW (Tantalum), process temperature limit is up to 200°C (392°F).

\*5: The upper ambient temperature limit is 50°C (122°F) in the following combinations.

| Process connection style code | Process connection size code |
|-------------------------------|------------------------------|
| W (Flush type)                | 2 (2-inch) or 8 (1 1/2-inch) |
| E (Extension type)            | 3 (3-inch)                   |

\*6: When selecting fill fluid code 4, take into consideration the characteristics of the process to be used. Fill fluid code 1 is recommended especially when using a transmitter in a harsh environment such as a process in which a vacuum state is maintained continuously (even outside of inspections) or a hydrogen generation process.

Note: The differential pressure transmitter should be installed at least 600 mm below the high pressure (HP) process connection. However, this value (600 mm) may be affected by ambient temperature, operating pressure, fill fluid or material of the wetted diaphragm.

Contact YOKOGAWA when the transmitter can not be installed at least 600 mm below the HP process connection.

●: Applicable

—: Not applicable

\*1: ANSI B16.5

### Electrical Connections

See "MODEL AND SUFFIX CODES."

### Transmitter Mounting

2-inch pipe mounting

### Wetted Parts Materials

#### Diaphragm seal

##### Diaphragm and other wetted parts;

Refer to "MODEL AND SUFFIX CODES."

#### Flushing connection ring (optional)

##### Ring and vent / drain plugs

Refer to "MODEL AND SUFFIX CODES."

(Spiral) gasket for transmitter side

316SST (Hoop), PTFE Teflon (Filler)

### Non-wetted Parts Materials

#### Transmitter body section:

##### Cover flange

ASTM CF-8M

##### Cover flange bolting

B7 carbon steel, 316L SST or 660 SST

##### Housing

- Low copper cast aluminum alloy
- Low copper cast aluminum alloy with corrosion resistance properties (copper content ≤ 0.03%, iron content ≤ 0.15%) (optional)
- ASTM CF-8M Stainless steel (optional)

##### Coating of housing

[for aluminum housing]

Polyester resin powder coating

Mint-green paint (Munsell 5.6BG 3.3/2.9 or its equivalent)

[for option code /P□ or /X2]

Epoxy and polyurethane resin solvent coating

### Degrees of protection

IP66/IP67, Type 4X

### Cover O-rings

Buna-N, fluoro-rubber (optional)

### Name plate and tag

316 SST

### Diaphragm seal section:

#### Process flange

JIS S25C, JIS SUS304, or JIS SUS316

#### Capillary tube

JIS SUS316

#### Protection tube

JIS SUS304 PVC-sheathed

(Max. operating temperature of PVC, 100°C (212°F))

#### Fill fluid

See table 1.

### Weight

Flush type: 9.8 kg (21.6 lbs)

(3-inch ANSI Class150 flange, capillary length 5 m; without integral indicator and mounting bracket.)

Extended type: 12.2 kg (26.9 lbs)

(4-inch ANSI Class150 flange, extension length (X2)=100 mm, capillary length 5 m; without integral indicator and mounting bracket.)

Add 1.5kg (3.3lb) for Amplifier housing code 2.

## ■ MODEL AND SUFFIX CODES

### ● Instruction

The model and suffix codes for EJX438A consist of two parts; a transmitter body section (I) and a diaphragm seal section (II). This specification sheet introduces these two parts separately. The transmitter body section is shown in one table, and the diaphragm seal section specifications are listed according to the process connection style.

First select the model and suffix codes of transmitter body section and then continue on one of the diaphragm seal section.

EJX438A –  –  –  –

The “►” marks indicate the most typical selection for each specification.

\*1: When specified process connection style code E, maximum range and span are 7 MPa (1000 psi.)

\*2: Not applicable for electrical connection code 0, 5, 7, 9 and A.

\*3: Not applicable for electrical connection code 0, 5, 7 and 9.

\*4: Material of a blind plug; aluminum alloy for code 5 and 9, and SUS304 for code 7.

\*5: Not applicable for output signal code G.

\*6: Not applicable for output signal code F.

● **Process connection size: 3-inch (80mm) / 2-inch (50mm)**

E06E ai

GS 01C25J03-01EN Feb. 28, 2014-00

The "►" marks indicate the most typical selection for each specification.

Example: EJX438A-DASCG-912EN-WA13B1SW00-BA25/□

- \*1: See table 3 'Gasket contact surface' on page 6.
- \*2: When specified flushing connection ring code A or B, exclusive gasket is provided for transmitter side.
- \*3: In case of wetted parts material code TW (Tantalum), the process temperature limit is -10 to 200°C.
- \*4: Wetted parts material code TW (Tantalum) cannot be applied.
- \*5: Even in case where fill fluid code D (fluorinated oil) is selected, if degrease cleansing treatment or both degrease cleansing and dehydrating treatment for the wetted parts is required, specify option code K1 or K5.
- \*6: In case of wetted parts material code HW (Hastelloy C), TW (Tantalum), and UW (Titanium) for 2-inch pressure flange, specify capillary length from 1 to 5 m.
- \*7: Not applicable for flashing connection ring code A and B.
- \*8: Not applicable for gasket contact surface code 1.
- \*9: Hastelloy C-276 or N10276.
- \*10: ⚠ Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user's process fluids.  
Be very careful with highly corrosive process fluids such as hydrochloric acid, sulfuric acid, hydrogen sulfide, sodium hypochlorite, and high-temperature steam (150°C [302°F] or above). Contact Yokogawa for detailed information of the wetted parts material.
- \*11: Forged version of the material may be used.
- \*12: Not applicable for wetted parts material code UW.
- \*13: The upper ambient temperature limit is 50°(122°F) when specifying process connection size code 2 (2-inch).

The '#' marks indicate the construction materials conform to NACE material recommendations per MR0175/ISO 15156.

Please refer to the latest standards for details. Selected materials also conform to NACE MR0103.

## II. Diaphragm seal section (Flush type)

## ● Process connection size: 1 1/2-inch (40 mm)

The "▶" marks indicate the most typical selection for each specification.

Example: EJX438A-DASCG-912EN-WA18B1SWD0-BA25/□

\*1: See table 3 'Gasket contact surface' on page 6.

\*2: When specified flushing connection ring code C or D, exclusive gasket is provided for transmitter side.

\*3: Even in case where fill fluid code D (fluorinated oil) is selected, if degrease cleansing treatment or both degrease cleansing and dehydrating treatment for the wetted parts is required, specify option code K1 or K5.

\*4: Not applicable for gasket contact surface code 1.

\*5: ⚠ Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user's process fluids.  
Be very careful with highly corrosive process fluids such as hydrochloric acid, sulfuric acid, hydrogen sulfide, sodium hypochlorite, and hightemperature steam (150°C [302°F] or above). Contact Yokogawa for detailed information of the wetted parts material.

\*6: Forged version of the material may be used.

GS 01C25J03-01EN    Oct. 01, 2012-00

- 
- \*1: See table 3 'Gasket contact surface' on page 6.
  - \*2: Even in case where fill fluid code D (fluorinated oil) is selected, if degrease cleansing treatment or both degrease cleansing and dehydrating treatment for the wetted parts is required, specify option code K1 or K5.
  - \*3: The specified capillary length includes the extension length (X2) and the flange thickness (t).
  - \*4: ⚠ Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user's process fluids.  
Be very careful with highly corrosive process fluids such as hydrochloric acid, sulfuric acid, hydrogen sulfide, sodium hypochlorite, and hightemperature steam (150°C [302°F] or above). Contact Yokogawa for detailed information of the wetted parts material.
  - \*5: Forged version of the material may be used.
  - \*6: The upper ambient temperature limit is 50°(122°F) when specifying process connection size code 3 (3-inch).

## ■ OPTIONAL SPECIFICATIONS (For Explosion Protected type) “◇”

For other agency approvals and marine approvals, please refer to GS 01C25A20-01EN.

Please select appropriate equipment in accordance with the laws and regulations of the relevant country/region, when it is used in a location where explosive atmospheres may be present.

| Item                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Code |

\*1: Applicable for Electrical connection code 2, 4, 7, 9, C and D.

\*2: Not applicable for option code /AL.

\*3: Lower limit of ambient temperature is -15°C (5°F) when /HE is specified.

\*4: When this option code is specified, a wired tag plate (as of N4 option) shall be used for tag number.

## ■ OPTIONAL SPECIFICATIONS

\*1: Not applicable for amplifier housing code 2 and 3.

\*2: Not applicable with color change option. Not applicable for amplifier housing code 2.

\*3: The specification is included in amplifier code 2.

\*4: Check terminals cannot be used when this option is specified. Not applicable for output signal code F and G.

\*5: The unit of MWP (Max. working pressure) on the name plate of a housing is the same unit as specified by option code D1, D3, and D4.

- \*6: Applicable for flush type (process connection style code W.)
- \*7: Applicable for flushing connection ring code 0.
- \*8: Specify the process operating temperature for zero correction. Example: Zero correction by process temperature 90°C.
- \*9: Applicable for output signal code D, E and J. The hardware error indicates faulty amplifier or capsule.
- \*10: Applicable for wetted parts material code SW, SE, and HW.
- \*11: Also see 'Ordering Information.'
- \*12: Applicable for flushing connection ring code A, B, C, and D.
- \*13: 316 or 316L SST. The specification is included in amplifier code 2.
- \*14: Applicable only for output signal code E and J.
- \*15: The change of pressure fluctuation is monitored and then detects the impulse line blockage. See TI 01C25A31-01E for detailed technical information required for using this function.
- \*16: The unit on the certificate is always MPa regardless of selection of option code D1, D3, or D4.
- \*17: A flushing connection ring will not be applied when conducting the pressure test or leak test.
- \*18: Applicable for extended type (process connection style code E.)
- \*19: Dry nitrogen gas is used for oil-prohibited use (option code K1 and K5.)
- \*20: Not applicable for Fill fluid code 1, 2, or 4.
- \*21: Applicable only for output signal code D, E and J.

## ■ DIMENSIONS

Unit: mm (approx.inch)

### < Transmitter body section >

\*1: When electrical connection code 7 or C is selected, a blind plug is protruded upto 8 mm (0.31 inch) from the conduit connection.

F09E.ai

## &lt; Diaphragm seal section &gt;

Unit: mm (approx.inch)

## • Flush type

• No ring (Flushing connection ring code 0)

• With ring (Flushing connection ring code A, B, C, and D)

## • Extended type

\*1: When wetted parts material code UW (titanium), value is 34 (1.34).

\*2: Indicates inside diameter of gasket contact surface.

\*3: In case where process flange material is JIS S25C, value of f is 0.

\*4: Flushing connection ring

\*5: When option code K1 or K5 is selected, add 11 mm (0.43 inch.)

\*6: The specified capillary length includes the extension length (X<sub>2</sub>) and the flange thickness (t).• Extension length (X<sub>2</sub>)

| Extension code | X <sub>2</sub> |
|----------------|----------------|
| 1              | 50 (1.97)      |
| 3              | 100 (3.94)     |
| 5              | 150 (5.91)     |

\*1: When wetted parts material code UW (titanium) is selected, value is 34 (1.34.)

\*2: Indicates inside diameter of gasket contact surface.

\*3: In case where process flange material is JIS S25C, value of f is 0.

## • Terminal Configuration

## &lt; Ordering Information &gt; “◇”

Specify the following when ordering

For output signal code **-J**, refer to GS 01C25T01-01EN.

1. Model, suffix codes, and option codes
2. Calibration range and units:
  - 1) Calibration range can be specified with range value specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000. When reverse range is designated, specify LRV as greater than URV.
  - 2) Specify only one unit from the table, 'Factory setting.'
3. Display scale and units (for transmitters equipped with the integral indicator only)
 

Specify either 0 to 100 % or 'Range and Unit' for engineering units scale:

Scale range can be specified with range limit specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000. Unit display consists of 6-digit, therefore, if the specified scaling unit excluding '/' is longer than 6-characters, the first 6 characters will be displayed on the unit display.
4. Tag Number (if required).
 

Specified characters (up to 16 characters for BRAIN, 22 characters for HART, or 16 characters for /N4 tag) are engraved on the stainless steel tag plate fixed on the housing.
5. SOFTWARE TAG (for HART only. If required)
 

Specified characters (up to 32 characters) are set as "Tag" (the first 8 characters) and "Long tag"\*1 (32 characters) in the amplifier memory. Use alphanumeric capital letters.

When the "SOFTWARE TAG" is not specified, specified "TAG NO" is set as "Tag" (the first 8 characters) and "Long tag"\*1 (22 characters) in the amplifier memory.

\*1: applicable only when HART 7 is selected.
6. Other factory configurations (if required)
 

Specifying option code **CA** or **CB** will allow further configuration at factory. Following are configurable items and setting range.

[/CA : For HART communication type]

  - 1) Descriptor (up to 16 characters)
  - 2) Message (up to 30 characters)
  - 3) Software damping (0.00 to 100.00 sec)

[/CB : For BRAIN communication type]

  - 1) Software damping (0.00 to 100.00 sec)
7. Process fluid temperature for zero compensation (if required)

## &lt; Information on EU WEEE Directive &gt;

EU WEEE (Waste Electrical and Electronic Equipment) Directive is only valid in the EU.

This instrument is intended to be sold and used only as a part of equipment which is excluded from WEEE Directive, such as large-scale stationary industrial tools, a large-scale fixed installation and so on, and, therefore, subjected to the exclusion from the scope of the WEEE Directive. The instrument should be disposed of in accordance with local and national legislation/regulations.
